

# ERRATA SHEET

## INPUT FUEL PRESSURE TO DEMAND REGULATOR

The demand regulator furnished with this generator can function at five to 14 inches of water column (0.18 to 0.50 psi) for a generator using natural gas. The Owner's Manual lists the required natural gas pressure incorrectly as 11 to 14 inches of water column (0.4 to 0.5 psi). The required fuel pressure for a generator using LP vapor remains at 11 to 14 inches of water column (0.4 to 0.5 psi).

Please keep this sheet for future reference.
